CHRISTOPHER HARVEY

610.613.8734 | chharvey@gmail.com | GitHub

Full stack web developer with experience in JavaScript, React, Redux, Ruby on Rails, and multiple CSS frameworks. I discovered web-development as a marketing manager when I was tasked to design our company's website. Since then I've continued to be interested in understanding how websites work and learning how to make them both visually appealing and user-friendly. Strategic thinking and exceptional analytical skills characterize my problem-solving as well as my decision making process.

TECHNICAL PROJECTS

Redditer | *Walkthrough* | *GitHub*
Allows users to create posts, which can be up and down voted, and sorted by popularity
- Utilized Oath with Google's API to afford a proven, standardized authentication process with minimal setup
- Implemented a React JS front-end framework for its ability to create great looking UIs with a high-degree of code-reusability
- Added Redux to ensure predictable application state management and updates
- Created a Rails API backend to leverage a RESTful API that easily integrates with other third-party services across the stack

YouTuber | *Demo* | *GitHub*
React application accessing Google's API and returning a search query's results into a video player
- Installed Axios to leverage library's ability to easily make HTTP requests to APIs
- Efficiently managed application state internally with React thereby forgoing unnecessary complex code from a third-party library

GitGrabber | *Demo* | *GitHub*
JavaScript application that communicates with GitHub's API to return a queried user's profile and repositories
- Created exclusively with JavaScript to strengthen competence with language
